user can post many post content, user_id is to link the post to the user who do the post, and post-id is the primary key to identifier the post.
other user can do repost, and other user can do many time as they want. For link to repost user the foreign key is the (repost user's)user_id.Each post can be repost manytime,and they will be linked by (original's)post_id. Repost will have a new id called repost_id to identifier it self.
