

This diagram is made under the logic that:

- 1.) Every User can make many Posts, or not
- 2.) Every Post can be Re-posted, or not
- 3.) Every User can make many Re-posts, or not

I have implemented the Re-post table to be a 'copy' of the Post table, where the User who has Re-posted can modify the original content of the Post and add a comment, which is stored as a separate, new attribute.
