A user can post many times. They still exist if they have not posted.

A post is only linked to the user who has posted the post. Must be posted once to exist.

A user can repost a post many times. A user still exists if they have not reposted.

A repost can be reposted is linked to 1 user who has reposted the post.

**REPOST:**

Composite Key:
Post_id and user id: together hold information for the initial user who reposted the post

Other Attributes:
comment - the user can comment on the repost
repost_num - keep track of how many times the post has been reposted
time - when the post was reposted
URL - the original location of the post before the repost

A post can be reposted many times but still exists if it has not been reposted.

A repost is connected to one post.
