Forward

This technical report contains 11 papers from the invited sessions on **Granular Computing and Data Mining** in *The Seventh International Conference on Fuzzy Theory and Technology (FT&T 2000)*, which is one of ten conferences in *The Fifth Joint Conference on Information Sciences*, February 27-March 3, 2000, Trump Taj Mahal Casino and Resort, Atlantic City, NJ USA. The invited sessions were organized by the invitation of Professor Paul P. Wang, General Chair of JCIS'2000. The theme is focused on the combination of the two new and fast growing research areas.

We wish to express our thanks to Professor Paul P. Wang for his kind support in organizing the special sessions, and to all participants for their valuable contribution.

Contents

A Local Nest Property in Granular Probabilistic Networks
C.J. Butz and S.K.M. Wong 1

Rough Scheduling: A Research Problem
J. Johnson 5

Evolutionary Information Retrieval
P. Lingras 9

Granular Computing and Imperfect Data in ILP
C. Liu and N. Zhong 13

Discovery of Knowledge about Drug Side Effects in Clinical Databases based on Rough Set Model
S. Tsumoto 17

Towards Fuzzification of Attribute-Oriented Generalization
S. Tsumoto and T.Y. Lin 21

Application of Matrix Logic to Fuzzy Computing
H. Yamauchi 25

Granular Computing: Basic Issues and Possible Solutions
Y.Y. Yao 29

Discovering the Difference in the Usage of Symbol Toward Improving Data Quality in Databases
T. Yoshida, K. Ohnishi, and S. Nishida 33

Quick Granular Rule Generation from a Database
Y. Zhang, G.S. Owen and R. Sunderraman 37

Multi-Database Mining: a Granular Computing Approach
N. Zhong 41
